## CENTRE FOR MICROBIOLOGICAL ANALYSIS TRAINING

### Merck India and the FSSAI partner on skills development in Food Safety

The Food Safety and Standards Authority of India (FSSAI) is an autonomous body established under the Ministry of Health & Family Welfare, Government of India. It is responsible for protecting and promoting public health through the regulation and supervision of food safety.

In that respect, Merck India has recently collaborated with them to set up a state of art **Center For Microbiological Analysis Training (C-MAT**), which will provide training to food safety scientists from government laboratories, FSSAI affiliated private laboratories and industry professions on the latest technology in microbiological testing.

The lab covers an area of 2,000 sq. ft. and houses the latest technology in microbiological food testing and environmental monitoring. It is equipped with GDS-IMS, Transia Platforms, MVP-ICON that will overcome many of the challenges faced by food safety scientists in pathogen testing and HACCP audit management. It is designed to meet BSL-II (Bio Safety Level) standard for microbial testing.

# In process testing

## A complete solution for bioburden analysis

Merck’s membrane filtration and culture media solutions for bioburden testing won't keep you waiting for the accurate results you need to ensure product safety. Merck’s membrane filtration technique complies with international standards such as Standard Methods for Examination of Water and Waste Water, US EPA, and EU esting procedures for drinking water. It’s simple: the test sample is filtered through a microporous membrane, allowing the retention of any microbial contamination on top of the membrane. Rinsing removes residues that might inhibit the growth of microorganisms. Once the sample is filtered, nutrient medium is added to promote growth of microorganisms for recovery.

# sterile irrad. Isopropyl Myristate

## Ordering number: 1.46628.0006

Isopropyl Myristate (IPM) is a fatty acid ester which is used as solvent in water-in-oil emulsion, oils and fatty based ointments. The use of IPM is recommended in the Sterility Test chapter of the European, Japanese and United States Pharmacopoeia (EP, 2.6.13, JP, 4.06 and USP, 71) as diluent for oils and oily solutions, as well as for ointments and creams. Indeed, its solvent properties improve the filterability of these samples.

### Product Information

Our irradiated IPM comes in a 500 mL glass bottle with a filling volume of 360 mL, closed with a septum and red flip cap. One box contains 6 bottles. The product is sterilized by gamma-irradiation with a dose range of 25 to 40 kGy.

### Appearance

The appearance of the fluid is clear and colorless. The clear glass bottle turns into an amber color due to the gamma-irradiation waves.

### Application

According to EP, JP and USP, oils and oily solutions of high viscosity may be diluted if necessary with isopropyl myristate to facilitate membrane filtration. The oil should penetrate the membrane by its own weight followed by filtering by gradual application of pressure or suction. The membrane may be washed 3 times with 100 mL Fluid D afterwards. At least one or one half of the filter is incubated in Tryptic Soy Broth (e.g. article number 146317) and a second or the other half of the filter in Fluid Thioglycollate Medium (e.g. article number 146406) for not less than 14 days.

According to EP, JP and USP, ointments and creams can also be diluted up to 1% in IPM prior to filtration.

**Note:** In case of direct inoculation of microorganisms into IPM, addition of 9% NaCl Peptone Buffer ensures recovery rate above 70%

### Storage and Shelf Life

The product can be used for sterility testing until the expiry date if stored upright, protected from light and properly closed at +2 °C to +25 °C.

### Disposal

Please mind the respective regulations for the disposal of chemicals. Waste material must be disposed of in accordance with the national and local regulations.

# **One Step Ahead**, in F&B hygiene monitoring with the **MVP ICON® system**

## **MVP ICON® –**
## one system helping you work smarter.

# MVP ICON®

### The most comprehensive hygiene monitoring system for the Food & Beverage industries

The MVP ICON® is the only system to provide true HACCP management capabilities for additional HACCP parameters beyond just ATP.

**Available measurements include:**

- ATP (Adenosine Triphosphate)
- Concentration (PPM) of prepared sanitizers
- Conductivity (µS) of water samples
- pH of prepared media and product samples
- Temperature in production processes and samples

## Accuracy

### Consistent performance at every step

MVP ICON® sampling devices are designed to compensate for variations in swabbing technique, so no matter how many technicians we have or the frequency of staff turnover, we can be assured of accurate, consistent readings.

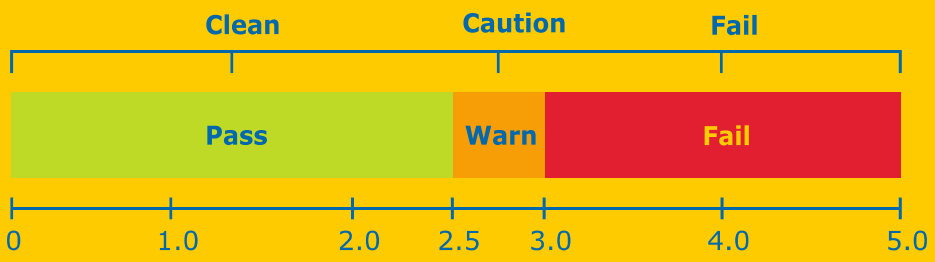
- MVP ICON® Dashboard Software
- Presentation-ready HACCP reports
- Automatically updated program metrics
- Onsite, anytime instrument calibration and verifications
- No risk of sample/ATP loss

# Intelligent Design

## Designed to your needs

The MVP ICON® instrument is ergonomically designed to lightweight, and it utilizes a color touchscreen display to make easy and efficient. And test results in both the MVP ICON® and MVP ICON® Dashboard software are intuitively color-helps ensure user comprehension and interoperability.

## Validate Cleaning and Sanitation



**Zones of Cleanliness®**

### Simplified result interpretation via Zones scale

ATP readings are reported in a proprietary Zones of Cleanliness™("Zones") scale adapted from Relative Light Units (RLUs). Like the Richter magnitude scale, the Zones scale takes a practical approach to reporting results, which improves user comprehension and allows operators to focus more on swabbing and testing during cleaning. Results fall into clean, caution, and fail areas so corrective action can be easily determined and immediately implemented.

### Performance is not affected by sanitizer interference

Proprietary reagents prevent chemical interference, allowing you to conduct ATP testing before or after sanitizing for utmost flexibility.

### Ready for immediate use

Storable at ambient temperature making them ready for immediate use with no waiting time. And sampling devices are room temperature stable for 12 months, which saves you valuable refrigeration space and recurring electricity costs.

# Risk Reduction

## We minimize risk to make your work more secure

ATP testing is only one facet of a hygiene monitoring program. But with the MVP ICON® we can accurately measure prepared chemical concentrations using the optional MVP ICON® Conductivity & Concentration Probe. This helps you avoid unnecessary over-use of expensive chemicals while ensuring your sanitizers work to effectively clean product contact surfaces.
